

**INVESTIGATION OF CYCLIC ISM APPEARING IN THE PURCHASE
PRICE AND QUANTITY OF TWO MAIN AGRICULTURAL PRODUCTS
(MAIZE AND PIG)**

Poór Judit, Nóra Hegedűsné Baranyai

Abstract

The aim of our examination was to show the cyclic character in the case of agricultural prices. Beside the investigation of prices the analysis of the purchased quantity is of importance too. We examined the way the prices and quantity exercise mutual influence and the connection between the maize purchase price and the pig purchase price. We compared the Hungarian purchase prices with some international ones, and analyzed the tendencies, the influence of open economies and the approach of the prices.
